## SUMMARY

Backend engineer experienced in building reliable, high-integrity systems for multi-tenant applications, including authentication infrastructure and data-isolated architectures. Focused on correctness, scalability, and production readiness, with a track record of designing systems that enforce strict access guarantees and perform consistently under concurrency. All projects include automated testing, CI/CD pipelines, and clearly defined service boundaries.

## SKILLS

|                        |                                                                                            |
|------------------------|--------------------------------------------------------------------------------------------|
| Backend & Architecture | Python (3.11+), FastAPI, Flask, Async Systems, API Design, Multi-Tenant Architecture, RBAC |
| Data & Storage         | PostgreSQL, SQLAlchemy, asyncpg, Alembic, Redis, Relational Data Modeling                  |
| Security & Auth        | JWT, OAuth2, Token Lifecycle Management, bcrypt, HTTPS / TLS                               |
| Infrastructure         | Docker, GitHub Actions, CI/CD Pipelines, Railway, Render                                   |
| Testing & Reliability  | pytest, pytest-asyncio, Integration Testing, HTTPX, Coverage.py, TDD                       |
| Languages & Tools      | Python, SQL, JavaScript, C, Linux, Git                                                     |

## EXPERIENCE

**Backend Systems Engineer** · Async & Scalable Systems 2025 – Present

- Built **async FastAPI** services with non-blocking **PostgreSQL** access, validated under 100–300 concurrent request simulations with 100% success rate.
- Designed **multi-tenant RBAC** systems enforcing database-level isolation, eliminating cross-tenant data access by construction.
- Built **CI/CD pipelines** with **Docker** and **GitHub Actions**, blocking deployments until the full test suite passes.

**Backend Developer** · Flask Systems 2025

- Built production **Flask** applications with **PostgreSQL**, **SQLAlchemy**, Alembic migrations, and modular Blueprint routing.
- Established backend architecture patterns: auth, ORM scoping, multi-tenant isolation, later reused in async FastAPI systems.

## PROJECTS

**gatevault** · Open Source Authentication Framework · PyPI [pypi.org/project/richard-gatevault](https://pypi.org/project/richard-gatevault) | [github.com/RichardOyelowo/gatevault](https://github.com/RichardOyelowo/gatevault)

- **Framework-agnostic** auth library with **JWT lifecycle**, **OAuth2 flows**, and **RBAC enforcement**, pure Python with no framework dependencies, reducing boilerplate by ~60–70%.
- Delivered with **90%+ test coverage** and full **CI/CD automation** via GitHub Actions covering every PyPI release.

**Snip** · URL Shortening Service · Live [snip-ly.xyz](https://snip-ly.xyz) | [github.com/RichardOyelowo/Snip](https://github.com/RichardOyelowo/Snip)

- High-throughput shortener using **atomic Base62 encoding** for collision-free codes, tested with 100K+ entries under concurrency with zero production failures since launch.

**Clustra** · Multi-Tenant Project Management API [github.com/RichardOyelowo/clustra](https://github.com/RichardOyelowo/clustra)

- Hierarchical system (Org → Team → Project → Task) with **5-level RBAC**, tenant isolation via ORM query scoping, and **gatevault** handling token injection via dependency injection.
- Async service layers at **90%+ test coverage** with pytest-asyncio; CI blocks every release until the suite clears.

**Multi-Tenant SaaS Dashboard** · Live [businessdashboard.shop](https://businessdashboard.shop) | [github.com/RichardOyelowo/Business-Dashboard](https://github.com/RichardOyelowo/Business-Dashboard)

- Zero cross-tenant data leakage via ORM query scoping to authenticated tenant ID; auth, dashboard, and admin fully decoupled via **Blueprint factory**.

## EDUCATION & CERTIFICATIONS

Harvard University (via edX) · CS50x & CS50P · Computer Science & Python Engineering · 2025

Open Source Author · Published Authentication Package on PyPI · 2026

Portfolio · [richardoyelowo.github.io](https://richardoyelowo.github.io)
