

Adebowale Richard Oyelowo

Backend Engineer | Python, FastAPI, PostgreSQL, Multi-Tenant SaaS

richardadebowale.oye@gmail.com | github.com/RichardOyelowo | linkedin.com/in/richard-oyelowo | richardoyelowo.github.io

Summary

Backend engineer shipping production Python SaaS systems on FastAPI and PostgreSQL. Author of **gatevault**, a PyPI-published authentication library. Has deployed multiple live applications end to end: schema design, async services, CI/CD, and multi-tenant RBAC. Seeking a full-time backend role.

Experience

Freelance Backend Engineer

Production SaaS & Open Source | Remote | Jan 2025 - Present

- Built and deployed production FastAPI applications with CI/CD, automated Alembic migrations, and pytest release gates on Railway and Render.
- Designed multi-tenant RBAC enforcing tenant isolation via ORM-level query scoping. Every query is hard-filtered to the authenticated tenant.
- Configured Docker and GitHub Actions workflows that block deployments until the full test suite passes. Releases cannot ship red.
- Built reusable auth infrastructure (JWT lifecycle, OAuth2, RBAC), later extracted into the published **gatevault** library.

Open Source

gatevault: Python Authentication Library

pypi.org/project/richard-gatevault | github.com/RichardOyelowo/gatevault | Jan 2026 - Present

- Authored a framework-agnostic auth library: JWT lifecycle, bcrypt hashing, OAuth2 flow, decorator-based route protection.
- Centralized auth via a shared **TokenManager** with dependency injection. Removes duplicated secret-key and expiry management across services.
- Pytest coverage for token creation, decoding, expiry, and signature tampering. Releases automated via GitHub Actions.

Selected Projects

Clustra: Multi-Tenant Project Management API

FastAPI, asyncpg, SQLAlchemy | github.com/RichardOyelowo/clustra | Mar 2026 - Present

- Async stack with FastAPI, asyncpg, and SQLAlchemy. Migrations auto-apply on each release via a startup script. Centralized RBAC enforces multi-org roles.
- Async service layers covered by pytest-asyncio. CI blocks every release until the suite clears.

Snip: Containerized URL Shortener

Docker, FastAPI, PostgreSQL | Live at snip-ly.xyz | Feb 2026

- Containerized URL shortener deployed via Docker with multi-stage builds, health checks, and a Postgres backend in a linked container.
- Atomic counter-backed Base62 encoding guarantees unique short codes under concurrent write load. No collisions, retry loops, or locking.
- Integration tests for redirects, short-code resolution, and admin flows caught four bugs before production deployment.

Skills

Languages: Python (3.11+), SQL, JavaScript/TypeScript, C

Backend: FastAPI, Flask, async systems, API design, multi-tenant architecture, RBAC

Data & Storage: PostgreSQL, SQLAlchemy, asyncpg, Alembic, Redis

Security & Auth: JWT, OAuth2, token lifecycle, bcrypt, HTTPS/TLS

Infrastructure: Docker, GitHub Actions, CI/CD, Railway, Render

Testing: pytest, pytest-asyncio, HTTPX, Coverage.py, TDD

Applied AI: LLM APIs, structured outputs, tool calling, prompt engineering

Education

Harvard CS50x & CS50P (via edX) | Computer Science & Python Engineering | 2025
