

# Richard Adebowale Oyelowo

Backend Engineer | Python • FastAPI • PostgreSQL | APIs & SaaS

[linkedin.com/in/richard-oyelowo](https://linkedin.com/in/richard-oyelowo) | [github.com/RichardOyelowo](https://github.com/RichardOyelowo) | [richardadebowale.oye@gmail.com](mailto:richardadebowale.oye@gmail.com)

## SUMMARY

Backend engineer building production Python systems with FastAPI, PostgreSQL, async services, authentication, RBAC, and tenant-isolated SaaS architectures. Comfortable taking projects from schema design through deployment, including migrations, auth, CI/CD, and test automation.

## SKILLS

**Backend & Architecture:** Python (3.11+), FastAPI, Flask, async systems, API design, multi-tenant architecture, RBAC

**Data & Storage:** PostgreSQL, SQLAlchemy, asyncpg, Alembic, Redis, relational data modeling

**Security & Auth:** JWT, OAuth2, token lifecycle management, bcrypt, HTTPS/TLS

**Infrastructure:** Docker, GitHub Actions, CI/CD pipelines, Railway, Render

**Testing & Reliability:** pytest, pytest-asyncio, integration testing, HTTPX, Coverage.py, TDD

**Languages & Tools:** Python, C, SQL, JavaScript/TypeScript, Linux, Git

**Applied AI:** LLM APIs, structured outputs, tool calling, prompt engineering

## EXPERIENCE

**Independent Backend Engineer** | Production SaaS & Open Source Projects | Remote

2025 - Present

- Built and deployed production FastAPI applications with CI/CD, automated Alembic migrations, and pytest-based release gates across Railway and Render.
- Designed multi-tenant RBAC systems enforcing tenant isolation, secure access controls, and ORM-level query scoping across live applications.
- Configured Docker and GitHub Actions workflows to block deployments until automated test suites passed.
- Developed reusable authentication infrastructure including JWT lifecycle management, OAuth2 flows, and role-based access patterns.
- Deployed DevBrain, a developer knowledge platform with authentication, rich text editing, search, and multi-tag filtering.
- Deployed Business Dashboard, a multi-user SaaS platform with customer and order management, row-level data isolation, and Blueprint factory architecture.

## PROJECTS

**RepoLens** | Repository Quality Analyzer | In Development

2026 - Present

- Building a CLI-first tool that validates repository paths, detects source repositories and supported stacks, then runs deterministic rules with testable IDs, severity, weights, and results.
- Planned rule coverage includes repository structure, dependency hygiene, tests, CI, secret handling, documentation, and language-specific project health across Python, JavaScript, TypeScript, Go, and Rust.
- Outputs a summary score and findings grouped by severity, including checks for README, license, GitHub Actions workflows, lockfiles, test files, dependency folders, and likely secret files.

**gatevault** | Open Source Auth Framework • PyPI

Jan 2026 - Present

[github.com/RichardOyelowo/gatevault](https://github.com/RichardOyelowo/gatevault) | [pypi.org/project/richard-gatevault](https://pypi.org/project/richard-gatevault)

- Designed and published a framework-agnostic auth library covering JWT lifecycle, bcrypt password hashing, OAuth2 login flow, and decorator-based route protection.
- Centralized auth configuration through a shared TokenManager wired via dependency injection, eliminating duplicated secret key and expiry management.
- Ships with pytest coverage for hashing, token creation and decoding, expiry enforcement, and signature tampering detection; releases automated via GitHub Actions.

**Clustra** | Multi-Tenant Project Management API • Python & JavaScript

Mar 2026 - Present

[github.com/RichardOyelowo/clustra](https://github.com/RichardOyelowo/clustra)

- Built async stack with FastAPI, asyncpg, SQLAlchemy, and JavaScript; migrations apply automatically on each release via startup script.
- Implemented multi-org role enforcement through centralized RBAC in permissions.py, with every query hard-filtered to the authenticated tenant ID.
- Async service layers covered by pytest-asyncio; CI blocks every release until the suite clears.

**Snip** | URL Shortening Service • Live: [snip-ly.xyz](https://snip-ly.xyz)

Feb 2026

- Used atomic counter-backed Base62 encoding to guarantee unique short codes under concurrent write load with no UUID collisions, retry loops, or locking overhead.
- Integration tests covered redirects, short-code resolution, and admin flows before launch, surfacing four bugs before production deployment.

**Business Dashboard** | Multi-Tenant SaaS Platform • Live: [businessdashboard.shop](https://businessdashboard.shop)

Jan 2026

- Blueprint factory pattern keeps auth, dashboard, and admin modules decoupled, with tenant isolation enforced through ORM query scoping.

## EDUCATION & CERTIFICATIONS

**Harvard University (via edX)** | CS50x & CS50P | Computer Science & Python Engineering | 2025

**Open Source Author** | Published Authentication Package on PyPI | [pypi.org/project/richard-gatevault](https://pypi.org/project/richard-gatevault)
